

# SQUEAKS WORKFLOWS

## PE Bag Jam

An **Alert** for a bag jam is sent out.

**Technician** receives the alert and heads to the site of the jam.

Technician 1 **takes a picture** of the jam.

The bag jam is **cleared**.

## VFD Fault

An **Alert** for a VFD fault is sent out.

**Electrical Maint.** receives the alert and heads to the site of the fault.

The alert is **escalated** due to it not being completed after 1 hour.

The **Maintenance Manager** is now notified via Microsoft Teams that a team member needs help.

The **Maintenance Manager** helps **reset** the fault

## Diverter Fault

An **Alert** for a diverter fault is sent out.

**Technician** receives the alert and heads to the site of the fault.

The alert is manually **escalated** by the Technician because he needs assistance to replace the belt.

A training video is **automatically attached** to the alert, to assist the technician in resolving the issue.

The Technician successfully **replaced the belt**.

## Jet Bridge Fault

An **Alert** for a jet bridge fault is sent out manually.

**Mechanical Maintenance** receives the alert and heads to the site of the fault.

The fault is **cleared**.
